## DISPLACEMENT TRANSDUCERS

## CDP-B Displacement Transducer <br> 5~25mm

The CDP-B displacement transducer is the CDP displacement transducer with a bellows attached to the measuring rod. It is used if measurement must be made in an adverse on-site environment.
Protection ratings: IP42 equivalent

## On-site application

## CDP-D Displacement Transducer <br> $50 / 100 \mathrm{~mm}$

The CDP-D displacement transducer is the CDP displacement transducer with dual isolated I/O ports. For example, one set of input and output cables can be connected to an analog measuring instrument and the other set to a digital measuring instrument. With two different types of measuring equipment connected to this transducer, simultaneous measurements can be made without interference.
