

High Performance, Easy Handling

Tokyo Measuring Instruments Lab.

# Everything inside <u>- "540" changes the strain measurement</u>

The TDS-540 is a data logger incorporating every function required for static strain measurement. It accepts strain gauges, strain gauge type transducers, dc voltage, thermocouples and Pt-RTDs as inputs. Our unique measurement technique enables highly stable and accurate measurement by eliminating the effects of various thermoelectromotive forces, thermal zero shift of amplifier and power line noise. Strain measurement of up to 1000 points is possible in 0.4 seconds by combining with optional high speed switching boxes. High resolution mode of  $0.1 \times 10^6$  strain is also possible. Furthermore, it is equipped with a newly developed remote data logger function which makes a remote control of the TDS-540 through internet browser possible. Optional wireless LAN allows measurement and monitoring of the data logger using a tablet terminal or smartphone. Other standard interfaces are Ethernet LAN, USB and RS-232C. In addition, our conventional

switching boxes can be used successively. You can configure a new strain measurement system according to your : (위) Jun/21/16 (09:20:07 measurement needs with the TDS-540. ## Thermocouple

Pt-RTD

# Reliability

### High accuracy and stability

Our unique measurement technique offers performance of eliminating the effects of various thermoelectromotive forces, thermal zero shift of amplifier and power line noise, that is superior to our former data logger TDS-530. More reliable and accurate measurement is realized.

### Reliable data storage

A secure internal memory device is provided for backup of measurement data in case of SD card failure. In addition, uninterruptible power supply circuit is provided for holding measurement data during unexpected power failure.

# Innovativeness

## Remote data logger function provided

Remote operation of TDS-540 through an internet browser is possible by the remote data logger function. In addition, downloading of measurement data files stored in TDS-540 is possible. The remote data logger function is available in any OS for personal computers without using dedicated software. It is applicable not only to a personal computer but also to multiple devices such as a tablet terminal or smartphone conforming to each communication mode.

## Selection of option units

Option units can be chosen when ordering your TDS-540. You can build the most suitable measurement system for you with these options.

# Operability

## Fast start

The TDS-540 starts up in 4 seconds, which is the fastest in our data loggers.

## Intuitive operation

The onboard color LCD with touch panel offers excellent intuitive operability. Response of touch panel has been improved to achieve stress-free operation. Often used functions are arranged in upper hierarchies. Input procedure for interval timer measurement has been simplified and the sensor ID setting display has been improved to offer easy operation.

## Continuity

## Inherited excellent functions

Every type of switching box developed by TML in these 20 years can be used with the TDS-540. Conventional switching boxes equipped with our unique functions can be used in the same way as before utilizing the functions such as high speed scanning of 1000 points in 0.4 seconds (in combination with IHW-50G \*), complete compensation method of strain, and 1-gauge 4-wire strain measurement with modular plug connection \*\*.

- \*: Automatic measurement of 1000 points in 1 second is possible in interval measurement.
- \*\*: Measurement of strain in 1-gauge 4-wire method is a factory installed option.

### Pursuit of simple operation

You can view the diagram of strain gauge connection in the display of the TDS-540. You can return to monitor screen from any screen by merely pressing the HOME key provided on the side of the display.

## Features

# DATA LOGGER TDS-540

## High Performance and Easy Handling

omputer

#### High speed scanning of 1000 points in 0.4 seconds In combination with high speed switching box IHW-50G, scanning

of 1000 points at maximum is performed in 0.4 seconds. The measurement speed is 1 second, and automatic measurement of 1000 points per every 1 second is possible using the interval timer.

#### Fast start in 4 seconds

Owing to the renovation of 🔜 conventional starting mechanism, the TDS-540 starts only in 4 seconds after the power is turned on. This is the shortest time required in our data loggers. After the start, a monitor screen is displayed. The right screen shows 10-channel

START = L ^ FILE: da 10.75 mm -23 με (M1001 rm1006 -24 με IM1002 FM1003 -26 με -23 με [M100 -32 με -26 με IM1004 **FM100**9 -32 με -25 με INITIAL C AUTO MEAS 🔅 SETTING

🕼 🕪 Jun/21/16 11:15:

Reliable data storage

#### UPS (Uninterruptible power supply)

Even if the power supply is interrupted unexpectedly during file access, the UPS works to supply power continuously to prevent damage to the file.

#### Data backup

monitoring.

A SD card is used for storing measured data. By the combined use of internal data memory which features excellent durability and reliability, data backup is secured even if SD card failure occurs.

We supply SD cards exclusively prepared for industrial use, which have data retention period of about 10 years and are suited to repetition of writing. The USB memory is intended only for copying measured data and reading them.

## LED color changes according to the type of sensor

In the built-in switching box, a connection terminal board, NDIS connector receptacle and LED are provided for each channel. The LED changes its emission color according to the type of connected sensor. You can know the type of the sensor by seeing the LED color without changing the screen to show the sensor mode.

### **HOME key**

On the display with touch panel, various settings are made by changing the screens in several hierarchies. It may take a few steps to return to the monitor screen from a setting screen. In such case, you can return to the monitor screen by merely pressing the HOME key. Quick operation is possible since the HOME key is positioned just above the START key.

### Display with touch panel for easy operation

The color LCD with touch panel provides excellent visibility and intuitive operability. Response of touch panel is 30 ms which is about twice as fast as our former model. You will not feel any stress in touch panel operation including changing screens. The display language is chosen between English and Japanese.

DC: DC voltage 640mV, 64V

Pt : Pt-RTD

### Sensor ID setting

The TDS-540 has a function to store the sensor ID. In this function, sensor parameters including coefficient, unit, display digit and sensor types are set and stored in one package. If you want to replace some of the already set and stored sensors, you may recall the stored sensor ID and renew only the sensor parameters to be replaced, and the new setting will be completed. In the following screens, renewed sensor ID is recalled on the TDS-540 display, and the sensor ID is allocated to the specified channels.

#### Setting example

can be edited using a personal computer. The edited setting is stored again in the memory and recalled by the TDS-540

### Automatic measurement

#### Interval timer

Quick setting: Automatic start of measurement by every 1 minute, 10 minutes or

#### Setting in table:

1 hour

Interval, real time start, number of repetition, step number, etc. are

#### set Sleep function:

Automatic power on/off before/ after scanning

#### Monitor comparator

Setting in table:

Automatic measurement according to comparison value, comparison method (variation or upper/lower limit value), number of start, step number. etc

#### Built-in switching box of 30 points at maximum Factory installed option

The TDS-540 is equipped with a built-in switching box unit of 10 points as its standard specifications. The number of units is expandable to 2 or 3 as factory installed option making number of points to 20 or 30. Sensors such as strain

gauges, strain gauge type transducers and thermocouples are connected to the built-in switching box.

Each point (channel) is equipped with a NDIS 7-pin connector receptacle and a LED with three emission colors to show the connected sensor type in addition to an ordinary terminal board. Also a surge absorber for lightening protection is provided for each point. The built-in switching box unit is

available in normal speed mode or high speed mode for switching speed, and either mode should be specified when ordering.

A built-in switching box unit for 1-gauge 4-wire measurement is under development.

The picture on the right may differ from the actual built-in switching box unit,

### **High speed printer**

High speed thermal printer is integrated. Its printing speed is 0.04 seconds for one line of one channel. Applicable paper: P-80 (80 mm wide)

High resolution mode (0.1×10<sup>-6</sup> strain) provided TEDS compatible (under development) Accepts SD card and USB memory as recording media Standard interface includes LAN, USB and RS-232C Built-in wireless LAN available as factory installed option (for use in Japan only). Applicable to network measurement system TML-NET

Available by combined use with ASW/SSW switching box control unit (factory installed option)

## Specifications

#### Built-in switching box unit Factory installed option DC Voltage measurement V 1/1 DC±640mV V 1/100 DC±64V 1 MΩ or more Input impedance Allowable input voltage DC ±70 V at maximum between B and D Thermocouple temperature measurement Applicable thermocouple T, K, J, B, S, R, E, N JIS C1602-1995, IEC 60584 Pt-RTD temperature measurement Applicable Pt-RTD Pt100 (500 µA Constant current 3-wire) JIS C1604-1997, IEC 60751

Strain measurement			
Bridge excitation	DC 2 V 24 ms (at power source 50 Hz)		
Initial value memory range	±160000×10 <sup>-6</sup> strain		
Temperature coefficient of accuracy	±0.002%rdg / °C		
Secular change of accuracy	±0.02%rdg / year		
	Measuring range	Resolution	
	±40000×10 <sup>-6</sup> strain	1×10 <sup>-6</sup> strain	
Measuring range and	±80000×10 <sup>-6</sup> strain	2×10 <sup>-6</sup> strain	
resolution	±160000×10 <sup>-6</sup> strain 4×10 <sup>-6</sup> strain		
	±320000×10 <sup>-6</sup> strain	8×10 <sup>-6</sup> strain	
	±640000×10 <sup>-6</sup> strain	16×10 <sup>-6</sup> strain	
Accuracy (at 23°C ±5°C) (Excluding 1-gauge 4-wire method)	±(0.05%rdg + 1 digit)		

## Strain measurement with constant current method (full bridge only)

Bridge excitation	DC6mA 24ms (at power source 50 Hz)			
Bridge resistance	350Ω			
Initial value memory range	±160000×10 <sup>-6</sup> strain			
Temperature coefficient of accuracy	±0.002%rdg / °C			
Secular change of accuracy	acy ±0.02%rdg / year			
	Measuring range Resolution			
	±40000×10 <sup>-6</sup> strain	1×10 <sup>-6</sup> strain		
Measuring range and	±80000×10 <sup>-6</sup> strain 2×10 <sup>-6</sup> strain			
resolution	±160000×10 <sup>-6</sup> strain 4×10 <sup>-6</sup> strain			
	±320000×10 <sup>-6</sup> strain	8×10 <sup>-6</sup> strain		
	±640000×10 <sup>-6</sup> strain 16×10 <sup>-6</sup> strain			
Accuracy (at 23°C ±5°C)	±(0.05%rdg+1digit)			

#### Strain measurement in high resolution mode (full bridge only)

or an incustrement in high resolution mode (iam bridge only)				
Bridge excitation	DC 5 V 48 ms (at power source 50 Hz)			
Initial value memory range	±16000.0×10 <sup>-6</sup> strain			
Temperature coefficient of accuracy	±0.002%rdg / °C			
Secular change of accuracy ±0.02%rdg / year				
Measuring range and	Measuring range	Resolution		
	±4000.0×10 <sup>-6</sup> strain	0.1×10 <sup>-6</sup> strain		
	±8000.0×10 <sup>-6</sup> strain 0.2×10 <sup>-6</sup> strain			
resolution	±16000.0×10 <sup>-6</sup> strain 0.4×10 <sup>-6</sup> strair			
	±32000.0×10 <sup>-6</sup> strain	0.8×10 <sup>-6</sup> strain		
	±64000.0×10 <sup>-6</sup> strain 1.6×10 <sup>-6</sup> strain			
Accuracy (at 23°C ±5°C)	±(0.05%rdg+3digits)			

## Strain measurement with constant current method in high reso-lution mode (full bridge only)

Bridge excitation	DC 14 mA 48 ms (at power source 50 Hz)				
Bridge resistance	350 Ω				
Initial value memory range	±16000.0×10 <sup>-6</sup> strain				
Temperature coefficient of accuracy	cient of ±0.002%rdg / °C				
Secular change of accuracy ±0.02%rdg / year					
	Measuring range	Resolution			
	±4000.0×10 <sup>-6</sup> strain 0.1×10 <sup>-6</sup> strai				
Measuring range and	±8000.0×10 <sup>-6</sup> strain 0.2×10 <sup>-6</sup> strain				
resolution	±16000.0×10 <sup>-6</sup> strain	0.4×10 <sup>-6</sup> strain			
	±32000.0×10 <sup>-6</sup> strain	0.8×10 <sup>-6</sup> strain			
	±64000.0×10 <sup>-6</sup> strain 1.6×10 <sup>-6</sup> strain				
Accuracy (at 23°C ±5°C)	±(0.05%rdg+3digits)				

#### DC voltage measurement

Initial value memory range				
V1/1	±160.000mV	±160.000mV

#### ISW/IHW unit Factory installed option

Specifications on measurement depend on the specificatios of each switching box. Connection

Connection					
Applicable type		IHW-50G/ISW-50G/ISW-10D			
	Number of connection and extension dis- tance	20 switching boxes for 1000 points, 800 m between instruments			
l` í	Connection cable	Extension cable for ISW/IHW CR-832M			
OPTICAL (Optical fiber)	Number of connection and extension dis- tance	20 switching boxes for 1000 points, 800 m between instruments			
	Connection cable	Optical fiber extension cable for ISW/IHW CR-842M			

## Option

#### ASW/SSW unit Factory installed option

Specifications on measurement depend on the specificatios of each switching box.

Connectio	n			
Applicable type	9	SSW-50D/SSW-50C/ASW-50C/NDR-100		
Applicable net	work module type	All types, One NDR-100 is required for every 100 points		
Number of connection	supplied	8 switching boxes for 400 points, Extension distance 120 m		
and extension distance	Booster power supplied	20 switching boxes for 1000 points, Extension distance 2 km		
		Switching box connection cable CR-65 or Switching box extension cable CR-800		

Note: Number of connection and extension distance of network modules depend on the specifications of NDR-100.

#### Factory installed option

#### **Built-in switching box unit**

- : High speed type with terminal board and connector receptacle Option code -H
- : Normal speed type with terminal board and connector receptacle Option code None
- Built-in 1-gauge 4-wire unit (Note \*)
- : 1-gauge 4-wire strain measurement Option code -HF (under development)

One unit for 10 channels is the standard specification. Two or three units for 20 or 30 channels

are available as factory installed option.

Note: The picture may differ from the actual built-in switching box unit.

#### Main functions of generally used switching boxes

Switching box type	Number of measuring points	Connector receptacle included	Constant current mode	High resolution mode	DC voltage	Thermo- couple	Pt-RTD	Arrestor equipped	1000 point measure- ment	Scanning speed	1-gauge 4-wire *
IHW-50G	50	-							1s	0.4s/1000	
IHW-50G-05	50	•	•		-	•			15	points	-
ISW-50G	50	-							3s	2s/1000

ASW-50C	50	-						_	80s	0.08s/	_
ASW-50C-05	50	•	•	•	-	•		_	005	point	_

\* 1-gauge 4-wire strain measurement method (abbreviated as 1G4W) In our unique 1-gauge 4-wire strain measurement method, a 4-wire lead wire is connected to a strain gauge, and the lead wire is quickly connected to a switching box using a modular plug. Labor and time for lead wire connection is largely reduced in multi-point measurement.

This method has the following advantages which eliminate the need of compensation for conventional quarter bridge method.

- Sensitivity drop is not caused by the lead wire resistance

• Thermal output is not caused by the change of lead wire temperature

• Measured value is not affected by the contact resistance of the lead wire In addition, this method enables lead-free connection using modular plug.

#### Wireless LAN unit: Option code -04

Remote operation of data logger TDS-540 is possible through internet browser. Operation from every terminal device is available without using dedicated software.

Built-in wireless LAN unit is not approved for use outside Japan. For remote operation of TDS-540 outside Japan, use a commercially available wireless LAN router for remote operation outside Japan.
